

SDET Interview Guide

1. Programming Output MCQs

- Understand loops, conditions, operator precedence, mutability.

Example:

```
a = [1,2,3]
```

```
b = a
```

```
b.append(4)
```

Output: [1,2,3,4]

2. OOP Concepts

- Inheritance, Polymorphism, Abstraction, Encapsulation.

Example:

```
A obj = new B();
```

```
obj.show(); // Runtime polymorphism
```

3. Selenium Theory

- Implicit vs Explicit Wait
- WebDriver vs RC
- Test Case vs Test Scenario

Implicit Wait: applies globally.

Explicit Wait: applies to specific element with conditions.

4. Coding Problems

- Arrays, Strings, Linked Lists, Trees.

Sliding Window Minimum:

Use deque to maintain increasing order for efficient window minima.

Linked List Intersection:

Use two pointers switching heads to find intersection.

Tree Traversals:

Inorder, Preorder, Postorder using recursion and stack.
